Fault-tolerant round-robin A/D converter system

Beckmann, P.E., Musicus, B.R.
Res. Lab. of Electron., MIT, Cambridge, MA;

Kayıd yazdırma

This paper appears in: [Circuits and Systems, IEEE Transactions on](#)

Publication Date: Dec 1991

Volume: 38, Issue: 12

On page(s): 1420-1429

ISSN: 0098-4094

References Cited: 8

CODEN: ICSYBT

INSPEC Accession Number: 4108845

Digital Object Identifier: 10.1109/31.108496

Posted online: 2002-08-06 17:38:50.0

Abstract

A robust A/D converter system that requires much less hardware overhead than traditional modular redundancy approaches is described. A modest amount of oversampling generates information that is exploited to achieve fault tolerance. A generalized likelihood ratio test is used to detect the most likely failure and also to estimate the optimum signal reconstruction. The error detection and correction algorithm reduces to a simple form and requires only a slight amount of hardware overhead. A derivation of the algorithm is presented, and modifications that lead to a realizable system are discussed. The authors then evaluate overall performance through software simulations
